PROFILE

I am a front-end web developer skilled in React and Node.js, known for creating visually appealing and interactive web applications. My expertise includes crafting engaging user interfaces and optimizing server-side rendering. I stay updated with the latest industry trends and prioritize clean, maintainable code. With a strong track record of successful projects, I am well-prepared to contribute effectively to any web development team.

PROJECTS

AI-Powered Content Summarization

Sumz AI Summerizer

Live Now

- The web page you've created is a powerful tool that harnesses the capabilities of OpenAI's API to provide content summarization services.
- Users can access this page by providing a link to the content they want to summarize.
- The page then uses OpenAI's advanced natural language processing algorithms to generate concise and coherent summaries of the provided content.

Key Features:

- Input Link:** The page prominently features a text box where users can input the URL of the web page or article they want to summarize.
- Summarization Process:** Once the link is submitted, the page communicates with OpenAI's API, which processes the content and extracts the most important information.
- Generated Summary:** The resulting summary is displayed on the page, allowing users to quickly grasp the key points of the original content without having to read the entire article.
- Customization Options:** Users may have the option to customize the length and style of the summary, tailoring it to their specific needs.
- User-Friendly Interface:** The page is designed with a clean and intuitive user interface, making it accessible to a wide range of users, including those with little technical knowledge.
- Share and Save:** Users can easily share the generated summaries or save them for future reference, enhancing the page's practicality and convenience.
- Privacy and Security:** The web page ensures the privacy and security of users' data, following best practices for data protection and handling.
